WOODEN BIRD FEEDER
FSC

Bird feeders can play a role in supporting local bird populations, particularly during seasons when natural food sources may be scarce. Bird feeders can be stocked with different types of food such as seeds, suet and fruit. The type of food put out and the placement of the feeder will determine the types of birds that will be likely to visit. Bird feeders offer an opportunity to observe birds up close and learn about their behavior, habits and interactions.

This item has been made of FSC certified material. FSC stands for sustainable forestry, assuring timber harvesting is less than the regrowth and it forbids harvesting in forests of ecological and cultural importance.
